

# Requesting Feedback from the Catalysis Community

## Workshop on Improving Rigor and Reproducibility in Heterogeneous Catalysis

Neil Schweitzer (Northwestern), Rob Rioux (Penn State), Raj Gounder (Purdue)

*This workshop will generate both short- and long-term actionable items*

The **short-term objectives** are to address scientific rigor in peer reviewed publications and funding proposals.

The **long-term objectives** are to establish *(i)* a national, multi-institutional network of testing laboratories, *(ii)* an inventory of recommended benchmark/control samples, *(iii)* a publicly accessible database of experimental catalyst data, and *(iv)* “how-to”/best practices training media for students/new researchers.

Participants for the in-person workshop will be limited, but we want to capture the diverse range of input, suggestions and feedback from all in the catalysis community as related to the mission, vision, and goals of this workshop.

Please submit your feedback by November 30, 2021 at the following link (google form):
